Contents

Use this guide as an end-to-end walkthrough or jump directly to the part of the product you need.

01	Getting started Account creation, sign-in, recovery and onboarding
02	Mission dashboard Daily signal, heatmap, streak and recommendations
03	Today and focus mode Timer, resources, exercises, tasks and reflection
04	Syllabus AI modules, subtopic completion and direct resources
05	DS95 Lab 24 languages, previews, compilers, files and runtime behavior
06	Projects and badges Three personal projects, repositories and achievements
07	Progress and backups Analytics, forecasts, CSV, JSON and restore
08	Accounts and data Cloud sync, device-local data and security
09	Mobile and accessibility Responsive and keyboard behavior
10	Troubleshooting Common issues and fast resolutions

The complete learning system

DS95 turns one chosen outcome into a personal syllabus, a daily execution loop, practical work and proof-of-learning projects.

95 guided days A sequenced route from the learner's current level to one concrete outcome.	8 modules and 40 subtopics AI-generated lessons, practice, checkpoints and reviews.
24-language IDE Local runtimes, web previews, isolated compilers and a learning notebook.	3 personal projects Goal-specific milestone plans that turn learning into evidence.
Verified GFG resources Direct articles appear only when domain-restricted research finds a relevant source.	Portable backups CSV activity exports and full JSON backup and restore.

TIP**The daily loop**

Open Today, learn from the direct resource when available, complete focused practice, record a reflection and convert the learning into project evidence.

Getting started

Create one secure account, define what you want to make or achieve and let AI build a personal 95-day system.

1. Create an account Enter your name, email and a password of at least eight characters. Verify the email when required.	2. Define the outcome Enter a subject, a specific result and your current experience level.
3. Set your cadence Choose the start date, daily target, study days and timezone used to calculate Today.	4. Generate the path DS95 creates eight modules, forty subtopics, ninety-five days and three projects.

TIP

Passwords and AI keys
Supabase owns passwords. The Groq key remains server-only and is never sent to the browser.

Changing direction

Build a new learning path from the account panel when your goal changes. Curriculum and project completion reset for the new path, while saved Lab files remain available. Existing users without an AI path keep the original Data Science roadmap and progress.

Mission dashboard

The dashboard converts the 95-day plan into a clear daily signal: what is done, what is next and whether your pace needs attention.

SCREEN - Mission dashboard with completion signal, active days and current mission.

Dashboard feature map

95-day signal Required curriculum completion, active days and total completed tasks.	Pace notice Actual completion compared with the expected percentage for the current day.
Current mission Today's topic, course, estimate and first incomplete task.	Streak metrics Current streak, longest streak, focused time and active-day totals.
Activity heatmap Clickable cells show full, partial, challenge, grace and overdue states.	Weekly direction Recommended next action and weekly study-goal summary.

TIP**Meaningful activity**

Completing a task or logging at least 30 focused minutes counts as an active day. Empty visits do not extend a streak.

03 - DAILY EXECUTION

Today and focus mode

Today turns the curriculum into one focused work session and keeps every completion synchronized with the syllabus.

Daily objective A concise outcome, total time estimate, difficulty and XP opportunity.	Focus timer Start, pause and stop a session. Stopped time is added to today's activity.
Executable exercise Use a common-language starter and continue it in the full 24-language Lab.	Interactive checklist Complete or reopen required tasks and optional challenges at any time.
Two-way completion A Syllabus topic already completed is shown complete when its day arrives.	Reflection Capture understanding, difficulty, confidence, notes and useful links.

Completion rules

The Finish day action becomes available after all required tasks are complete. Optional challenges award extra XP but never block the day. Reopening a topic updates both Syllabus and Today when they refer to the same curriculum topic.

TIP**Use the Lab handoff**

Choose a starter in Today's exercise and select Open and run in Lab. DataSprint creates a day-linked file only once and reopens the same saved work later.

Syllabus

Browse the AI-built curriculum, learn subtopics out of order and keep early completions ready for their scheduled day.

COURSE 1 · 12 HOURS

What is Data Science?

14%

1

Definition and importance of data science

Lesson + guided practice · 35 min

Learn this topic on GeeksforGeeks

2

Structured and unstructured data

Hands-on exercise · 45 min

Learn this topic on GeeksforGeeks

3

Applications of data science

Hands-on exercise · 55 min

Learn this topic on GeeksforGeeks

4

Data careers and responsibilities

Lesson + guided practice · 35 min

Learn this topic on GeeksforGeeks

5

Four types of analytics

Hands-on exercise · 45 min

Learn this topic on GeeksforGeeks

6

The data-science workflow

Hands-on exercise · 55 min

Learn this topic on GeeksforGeeks

7

Turning needs into business questions

Lesson + guided practice · 35 min

Learn this topic on GeeksforGeeks

8

Privacy, ethics, fairness and bias

Hands-on exercise · 45 min

Learn this topic on GeeksforGeeks

More free resources: official documentation, Kaggle Learn, freeCodeCamp

Test prior knowledge

SCREEN - Expandable modules with topic completion and direct learning resources.

Personal structure Eight progressive modules contain five concrete subtopics each.	Verified direct links A GeeksforGeeks article appears only when its URL is present in the web-search sources.
Honest fallback No relevant guide found is shown when GeeksforGeeks does not cover a subtopic.	Manual completion Select a numbered topic control to complete it; select the check again to reopen it.
Future-day awareness Early completion remains stored and automatically appears in Today when scheduled.	Module percentages Each percentage is calculated from its actual completed subtopics.

DS95 Lab

Create, save and run work across 24 languages using local runtimes, web previews and isolated compilers.

DATASPRINT LAB · BROWSER IDE

Write. Run. Learn. Keep the work.

Python, R and PostgreSQL run in your browser. Files sync to your account.

Python 3 R PostgreSQL

The screenshot displays the DS95 Lab Browser IDE interface. On the left is a sidebar with a project explorer showing sections: 'NEW WORKSPACE' with buttons for '+ PYTHON', '+ R', and '+ SQL'; 'TODAY & DAILY' with a Python file 'Day 24 - DataFrames'; 'PORTFOLIO PROJECTS' with an SQL project 'Mobility Warehouse' (selected) and a Python project 'Air Quality'; and 'SCRATCH FILES' with an R file 'Statistics notes'. The main area is titled 'SQL - NYC Mobility Analytics Warehouse' and includes a '✓ SAVED TO ACCOUNT' status. Below the title bar, there's a 'PostgreSQL' label and 'Run' and 'Delete' buttons. The SQL editor contains a query to create a table and select data. The 'OUTPUT' section at the bottom shows the query results in a table format.

```
1 CREATE TABLE IF NOT EXISTS trip_metrics (  
2   borough TEXT,  
3   trips INTEGER,  
4   avg_fare NUMERIC  
5 );  
6  
7 SELECT borough, trips, avg_fare  
8 FROM trip_metrics  
9 ORDER BY trips DESC;  
10  
11 -- Run with Cmd/Ctrl + Enter
```

borough	trips	avg_fare
Manhattan	184920	28.40
Brooklyn	94310	24.10
Queens	81280	31.75

3 rows returned.

SCREEN - Project explorer, SQL editor, account-save signal and result table.

Runtime behavior

RUNTIME	EXECUTION	PERSISTENCE
Local WASM	Pyodide Python, WebR and PGLite PostgreSQL execute directly in the browser.	Source syncs; SQL data stays on device.
Web preview	HTML and CSS render in a sandboxed preview without deployment.	Source syncs to the account.
Compilers	18 programming languages execute in an isolated Judge0 service.	Source syncs; execution is temporary.
Notes	A structured notebook for understanding, evidence, questions and next actions.	Content syncs to the account.

IDE controls

Explorer Groups Today and Daily, Proof-of-Learning Projects and Scratch Files.	Language picker Choose 24 grouped languages or use quick-create shortcuts.
General notebook Non-code topics open a structured place for understanding, evidence and questions.	Run and shortcut Use Run, Preview or Cmd/Ctrl + Enter and follow every execution state.
Rich output Read console text, compiler errors, SQL result tables or a web preview.	Execution limits Remote jobs are authenticated, size-limited, time-limited and network-disabled.

TIP

Privacy boundary

Python, R and PostgreSQL run locally. Code in other compiler languages is sent to the configured isolated execution service, so never put credentials or private data in runnable source.

06 - PROOF OF LEARNING

Projects and badges

Turn learning into visible evidence using three AI-designed projects connected to the selected outcome.

SCREEN - Project cards with milestone progress and resource actions.

Three progressive project briefs

01 Foundation artifact

Demonstrate command of the core concepts with a small, well-explained deliverable.

02 Applied outcome prototype

Combine modules to build something useful and test it against clear criteria.

03 Final proof of learning

Create, refine and publish the strongest evidence that the selected outcome was achieved.

Goal-specific design

Titles, tools and milestones are generated from the selected subject and outcome.

Milestones

Every checklist item updates the real project completion percentage.

Project workspace

Open a language-matched Lab file attached to the project.

GitHub repository

Link one github.com/owner/repository URL, open it later or unlink it.

Twelve badges

Achievements reward first steps, streaks, focused time, topics, modules and shipped projects.

No demo progress

Project completion and badges are calculated only from this account's state.

Progress, analytics and backups

Understand your pace, preserve a portable copy and restore your learning state when needed.

Syllabus completion Percentage of required curriculum work completed.	Streak and tasks Current and longest streak plus total completed tasks.
Trajectory Actual progress compared with the expected 95-day line.	Weekly pace Focused-hour bars and a completion-day forecast.
Topic signals Strengths and recommended review areas.	CSV export Dates, focused minutes and task counts for external analysis.
JSON backup The complete state including workspaces and repository links.	Validated import Malformed structures are rejected before replacing current state.

TIP**Safe backup habit**

Download a JSON backup before importing another file. Keep periodic snapshots when you make major project or workspace changes.

Reading the forecast

Expected progress is based on the current day divided by 95 and is capped at 100 percent. The completion outlook compares that expectation with actual required-task completion and suggests a pace adjustment when the projected finish moves beyond Day 95.

Accounts, data and security

Know which information is cloud-synced, device-local or controlled by the authentication provider.

Cloud-synced Generated path, preferences, activities, topics, project milestones, personal tasks, source files and repository links.	Device-local The live PGlite SQL database is stored through IndexedDB. Re-run saved SQL on another device to recreate tables.
Never exposed The plaintext password and server-side Groq API key.	Offline fallback The browser retains a user-specific local copy when cloud progress is temporarily unavailable.
Resource safeguards Search is domain-restricted; generic searches, other hosts and unverified links are removed.	Account isolation Storage keys and database records are scoped to the authenticated user ID.

Mobile and accessibility

The interface adapts from a wide control room to a touch-friendly mobile learning companion.

Responsive navigation Desktop floating navigation becomes a six-item bottom bar on small screens.	Adaptive layouts Cards, charts and the Lab explorer stack when space is limited.
Touch-friendly actions Primary actions, checks and navigation retain usable target sizes.	Keyboard workflow Skip-to-content support and Cmd/Ctrl + Enter execution in the editor.
Screen-reader state Current navigation, completion and pressed states use semantic attributes.	Reduced motion System reduced-motion preferences disable nonessential movement.

Mobile Lab behavior

On screens below 720 pixels, the file explorer moves above the editor and becomes a bounded scroll area. The editor, output panel and runtime notes remain accessible in a single vertical flow. The source code remains cloud-synced exactly as it is on desktop.

TIP

Best mobile use
Use mobile for reading, completing tasks, short experiments and reflections. A wider screen is more comfortable for long project notebooks or complex SQL.

Troubleshooting

Use these checks before assuming your work is lost.

Progress says Device only The browser saved locally but could not reach cloud persistence. Keep the page open, restore connectivity and make another small update.	Python or R is loading The runtime is downloaded lazily on first use. Wait for Loading runtime to change to Running.
Compiler service unavailable The isolated execution service may be busy. Retry shortly or check the configured Judge0 deployment.	SQL tables are missing elsewhere PGlite tables are browser-local. Run the saved CREATE and INSERT statements on the other device.
A topic is already complete It may have been completed earlier from Syllabus. The same topic is reflected in Today.	No password reset email Check spam, verify the address and ensure the production return URL is allowed in Supabase.
GitHub URL rejected Use github.com/owner/repository. Profiles, other hosts and deeper paths are rejected.	Import rejected Only a valid DataSprint JSON backup is accepted. Restore the original file or export a new backup.

Quick reference

Five habits keep the sprint accurate, portable and portfolio-ready.

01	Complete honestly Mark work complete only when you can explain or reproduce it.
02	Focus deliberately Use the timer; thirty meaningful minutes can extend an active day.
03	Keep code with context Store examples beside the day or project that produced them.
04	Ship evidence Link a repository and document decisions, checks, results and limitations.
05	Back up periodically Keep a JSON snapshot before large imports or major account changes.

TIP**The shortest successful loop**

Open Today, complete one meaningful task, use the direct resource when available, write one reflection sentence and save one piece of evidence.

One goal. One personal path. Ninety-five days.
